F o u n d a t i o n

**Parents and students increasingly seek more access, choice and flexibility than the traditional one-size-fits-all public education model provides. Innovative educators and lawmakers are exploring ways to incorporate technology with virtual courses, allow parents to choose schools within the public education system, and provide students flexibility with part-time enrollment.**

**All of these changes provide consumers with alternatives to the traditional public school monopoly, while introducing competition that will raise the overall quality of public education.**
