Methodology

The survey of 1,000 Registered Voters in Texas was conducted by RMG Research, Inc. using a mixed mode approach from July 20-23, 2021. Most respondents were contacted online or via text while 93 were contacted using automated phone polling techniques. Online respondents were selected from a list of Registered Voters and through a process of Random Digital Engagement. Certain quotas were applied, and the sample was lightly weighted by geography, gender, age, race, education, internet usage, and political party to reasonably reflect the state's population of Registered Voters. Other variables were reviewed to ensure that the final sample is representative of that population.
