

Erin Bordelon
National Sustainability Director
D.R. Horton

Erin Bordelon is National Sustainability Director at D.R. Horton, America's largest homebuilder by volume since 2002 and the largest in Texas. She leads the company's national sustainability strategy, translating regulatory requirements into cost-effective solutions adopted consistently across a decentralized network of operating divisions. Her work spans residential energy codes and standards, including the International Energy Conservation Code and the HERS Index, and how they perform at production scale.

Erin works directly with policymakers and division leadership on code development and implementation and participated in developing the 2027 International Energy Conservation Code. She serves a second term on the RESNET Board of Directors as the production builder representative, a seat she holds through the Leading Builders of America.

Based in Dallas, Erin began her career in commercial architecture and engineering, then spent 15 years as a HERS energy rater and consultant, including service as a RESNET Quality Assurance Designee. She has also worked directly with municipalities on code implementation, enforcement, and local amendments. Her work is guided by a simple principle: if it's not affordable, it's not sustainable.
